**about the harvest:** Grapes were harvested at 25°C, destemmed and transferred to open and closed stainless steel fermentation tanks.

**in the cellar :** After the addition of selected yeast, the juice, together with the skins, were allowed to ferment at controlled temperatures of 25°C - 28°C. During fermentation, skins that tend to rise to the top were regularly pushed down to cool the cap and to optimise flavour and colour extraction. At 5°C, juice was drained from the skins and fermentation allowed to continue in closed tanks. Any juice remaining in the skins were recovered with the use of a gentle tank press. After allowing for malolactic fermentation the wine was racked from the lees and transferred to 225 L oak barrels for maturation.

**Barrel maturation:** 12 months

**Type of Wood:** 15% New French oak, 13% 2nd fill French oak & 72% 3rd fill and older French oak.
