about the harvest: We had a late 2010 winter with a little below average rainfall, but cold enough in May to ensure even bud-break in spring. The growing season was cool with some regular rainfall, which made up for the drier winter. Flowering was good and although December was very windy (most in 42 years), we had no damage and a normal healthy crop of very good quality. The harvest period was very hot and dry, but we managed to get all the grapes to the cellar in the cool mornings at optimum ripeness - @ 21.8°B to 25.1°B

Harvest Dates: 1/2/11 – 28/2/11.
