in the cellar :

The grapes are harvested by hand at 18-20° Balling from January until mid-February. After whole bunch pressing with minimal skin contact, the clear grape juice is left to settle before it is pumped into steel tanks for cold fermentation.

After the first fermentation and malolactic fermentation the wine is prepared for secondary fermentation in the bottle. The wine is left on the lees for two years before the sediment is removed in the traditional process of "remuage" and "dégorgement". The bottles are then corked and laid down in a cool cellar for a further 2-4 months.
