in the vineyard : The grapes were sourced from vineyards in the Darling and Ceres areas. Grafted onto nematode-resistant rootstock Richter 99 and 101- 14, some of the vines received supplementary irrigation from a microirrigation system while in other instances, fruit was grown under dryland conditions. Yields averaged around 8,5 tons per hectare.

in the cellar : The grapes were harvested by hand at 21° to 23° Balling in February and March. The fruit was crushed and gently pressed to extract quality juice. Fermentation took place in stainless-steel tanks at 15° to 16°C. The fermenting wine was put through a centrifuge separator once the desired sugar and alcohol levels were reached.
