about the harvest: Harvesting occurred at optimal ripeness when the grapes were between 24 – 25° Balling. Picking was done by hand early in the morning and only the best grapes were selected. Sulphur was used to protect the grapes from oxidation during transportation.

in the cellar : A controlled pump-over schedule was followed to extract intense colour without harsh tannins. The wine was fermented for 8 days on the skins and malolactic fermentation commenced in tank. After malolactic fermentation, the wine was racked and matured in French- and American oak for 8 months.
